

# Integrated Management System Policy

---

In order to ensure the sustainability of the living ecosystem, MAT Filtration Technologies Inc., which designs, manufactures, and provides the necessary service operations for Water Filtration Systems, has been structured and certified in accordance with the requirements of the Integrated Management System, comprising Quality, Environmental, and Occupational Health and Safety Management Systems.

With the values and participation of our stakeholders, we aim to continuously develop and maintain this system, act in compliance with national and international legislation, earn the trust of our customers, and contribute to sustainable development.

In line with this purpose, we are committed to:

- \* Maximizing customer satisfaction and further improving the existing satisfaction level by accurately identifying customer needs and expectations, and providing timely and complete services;
- \* Managing and supporting our relationships with all stakeholders transparently and with a focus on creating value;
- \* Raising the efficiency of all our processes to a level that ensures international competitiveness in line with the Business Excellence approach;
- \* Integrating technological advancements into our corporate systems and activities;
- \* Ensuring information security and business continuity in all our operations;
- \* Establishing an effective and healthy communication environment to align our corporate governance values with our total quality culture;
- \* Carrying out collaborations and activities with our stakeholders, as well as with national and international public authorities, in line with a sustainable world approach;
- \* Developing systems to ensure occupational health and safety, prevent work accidents, and improve working conditions;
- \* Enhancing cooperation with neighboring facilities, competent authorities, and local administrations on Health, Safety, and Environmental (HSE) matters;
- \* Establishing an organizational structure capable of effectively responding to emergencies;
- \* Focusing on protecting the natural environment and maintaining respect for people and nature;
- \* Prioritizing the conservation of natural resources and minimizing the environmental impacts of our activities to ensure sustainability;
- \* Contributing to energy security and climate change mitigation through investments in renewable energy resources;
- \* Effectively managing risks and opportunities and continuously improving all our processes.
