Reference letter – MAT Recirculation Aquaculture System

Dear M. MUTKLILIOGLU

In 2020, Ferme piscicole des Bobines inc. has contracted MAT Filtration technologies to supply a RAS skid filtration unit in Québec, CANADA. This system was designed to be the heart of our new state of the art hatchery.

MAT provided a complete filtration system composed of the following : ultraviolet disinfection, protein skimmer, moving bed biofilter reactor (MBBR) and degassing tower. The system was designed to treat 400 000 liters per hour of recirculating aquaculture water.

From the beginning of the project until the start-up of the system, we felt that the MAT aquaculture team was entirely dedicated to the success of our project. The quality of the service and of the product is undoubtedly the main value of MAT team of professionals.

I, Clément Roy, co-owner of Ferme piscicole des Bobines inc., am proud to strongly recommend the expertise and competence of MAT Filtration technologies

About us :

Ferme piscicole des Bobines operates a land based trout fish farm in Québec, Canada since 1975.

If you have any question regarding this reference letter, please do not hesitate to contact me directly.

Sincerely,

Clément Roy, co-owner
